## **GRABCON**<sup>®</sup>

**HEX HEAD AND COUNTERSUNK** 

Phillips #2 Countersunk Head

Hex Head Carbon Steel Ruspert Coated Countersunk Carbon Steel Ruspert Coated

## Grabcon<sup>®</sup> Hex Head & Countersunk

Grabcon® is part of ICCONS® concrete and masonry screw family, coated in a ruspert protective coating and available in a flanged Hex Head or Phillips #2 Countersunk Head styles, these fasteners are ideal for light to medium duty applications when fastening into concrete, brick & block.

## MATERIAL SPECIFICATIONS

#### **GRABCON®** Hex Head Masonry Screw

	-
Anchor Size	6.5mm
Drill Size	3/16"
Fixture Clearance Hole	8mm
Socket Size	5/16"
Flanged Hex Head O.D.	10.6mm
Coating	ruspert protective coating (1000hrs SST)

GRABCON® Countersunk Masonry Screw		
Anchor Size	5mm	6.5mm
Drill Size	5/32"	3/16″
Fixture Clearance Hole	6.5mm	8mm
Phillips Bit Size	2	3
Countersunk Head O.D.	10mm	13mm
Countersunk Head height	3.6mm	5mm
Coating	ruspert protective coating (1000hrs SST)	ruspert protective coating (1000hrs SST)

**Note:** The above performance information incorporates a safety factor of 3. All loads relate to a single anchor remote from an edge. Spacing 12d (Min.) and Edge Distance 12d (Min.).

Limit State Design - Multiply the above loads by 1.8 to determine the Limit State Design capacities.

**DESIGN CONDITIONS - SIMPLIFIED DESIGN METHOD** 

## USING THE REDUCTION FACTORS

#### **SPACING -** TENSION & SHEAR (S)

EDGE DISTANCE - TENSION (C)

**EDGE DISTANCE -** SHEAR (C)

To achieve published tension and shear loads the anchors should be installed at least 12 x the anchor drill diameter between each other. If spacing between anchors is closer than 12 x the anchor drill diameter apply appropriate reduction factor as outlined in the SPACING TABLE to the published load to ascertain the reduced load.

To achieve published tension loads the anchors should be installed at least 8 x the anchor drill diameter from a concrete edge. If edge distance is closer than 8 x the anchor drill diameter apply the appropriate reduction factor as outlined in the EDGE DISTANCE TENSION TABLE to the published load to ascertain the reduced load.

To achieve published shear loads the anchors should be installed at least 12 x the anchor drill diameter from a concrete edge. If edge distance is closer than 12 x the anchor drill diameter apply the appropriate reduction factor as outlined in the EDGE DISTANCE SHEAR TABLE to the published load to ascertain the reduced load.

#### **Reduction Factors**

	Anchor S	ize (mm)		REDUCTIO	FACTORS		
Diameter	<b>4</b> (5/32″)	5 (3/16″)	SPAC	NG (S)   SHEAR	EDGE DIS TENSION	TANCE (C)   SHEAR	
(d)			S <sub>t</sub>	S <sub>s</sub>	C <sub>t</sub>	C <sub>s</sub>	
4(d)	16	20	0.50	0.75	0.76	0.24	
5(d)	20	25	0.56	0.78	0.82	0.34	
6(d)	24	30	0.63	0.81	0.88	0.43	
7(d)	28	35	0.69	0.84	0.94	0.53	
8(d)	32	40	0.75	0.88	1.00	0.62	
9(d)	36	45	0.81	0.91		0.72	
10(d)	40	50	0.88	0.94		0.81	
11(d)	44	55	0.94	0.97		0.91	
12(d)	48	60	1.00	1.00		1.00	

#### **Base Material Thickness**

#### Base material thickness should be 1.5 x h<sub>embed</sub>, or a minimum of 75mm, always use the greater of the two values.

Combined Tension & Shear Loading

For combined tension and shear load applications the following equations shall be satisfied;  $N_{applied} / N_{rec} \le 1$   $V_{applied} / V_{rec} \le 1$   $(N_{applied} / N_{rec}) + (V_{applied} / V_{rec}) \le 1.2$ 

Where:

N<sub>rec</sub>

V<sub>rec</sub>

Napplied

= Applied Tension Load

- = Recommended Tension Load
- V<sub>applied</sub> = Applied Shear Load
  - = Recommended Shear Load

# **GRABCON**°

## HEX HEAD INSTALLATION

With the correct diameter drill bit, drill a hole to the depth of at least one diameter of the anchor deeper than required embedment.

Clean dust and other material from the hole.

Install with either a socket or cordless impact driver. Apply pressure against the fixing and rotate to engage the first thread.

Continue to tighten the anchor until hex head is firmly seated against fixture. Installation complete!

### COUNTERSUNK HEAD INSTALLATION

With the correct diameter drill bit, drill a hole to the depth of at least one diameter of the anchor deeper than required embedment.

Clean dust and other material from the hole.

Install with either a socket hex driver or cordless impact driver. Apply pressure against the fixing and rotate to engage the first thread.

Continue to tighten the anchor until countersunk head is firmly seated against fixture. Installation complete!
