THRU-BOLT™ PRO STUD ANCHOR

NATIONAL CODE COMPLIANT

ICCONS® THRU-BOLTTM PRO is a pre-assembled torque controlled mechanical stud anchor, which when tightened draws the tapered end of the bolt into the expander clip expanding it to create expansion forces against the wall of the hole.

•

- Torque controlled high performance anchor
- Through fixing for fast installation
- Engineered clip for optimum expansion and anti-rotation
- Red ETA embedment depth mark providing ease of installation on site
- Available in zinc and sherardised corrosion resistant finish
- ETA assessed ETA 20/0900
- Uncracked and cracked concrete assessed
- AS 5216 compliant
- Seismic C1 and C2 assessed (Sherardised pending)
- Fire assessed (zinc and sherardised finish)
- Identification code on bolt head for easy traceability

•

ETA ASSESSED RANGE

* Sherardising is a process of galvanisation of ferrous metal surfaces, also called dry galvanising. The process involves heating the steel up to 500°C in a closed rotating drum that contains metallic zinc dust.

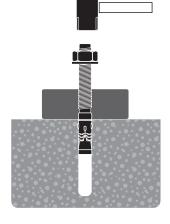

INSTALLATION

 Drilling Use drill in hammer mode.
Drill to specified diameter and depth for the required size.

 Blow and clean
Clean the drill hole completely of dust and debris.
Use blow pump and brush

3. Install

Insert the anchor in the hole until the red ring mark is flat with the concrete surface.

Use hammer if required; DOMTA tool can be used alternatively. The installation may be done through the fixture baseplate. Apply torque
Apply nominal installation torque using a torque wrench.
Once installed verification of the total length of the anchor can be made through the letter on the head.

Download DesignPRO AS5216:2021 COMPLIANT NCC ANCHOR DESIGN IT'S EASY AND FREE

- Fast software download and its easy and FREE!
- ICCONS® DesignPRO Anchoring Software complying with AS 5216:2021
 - Includes Design of fastenings under seismic actions
 - Includes Design of redundant nonstructural system
 - Combined loading and displacement calculations
- Unique all-in-one screen interface with easy data input and results display
- Interactive 3D model display for clear anchor and baseplate layout including rotation functionality

- Integrated FEA (Finite Element Analysis) for quick base plate thickness calculations
- Offers design solutions for rigid and elastic baseplates
- Flexible custom anchor and base plate geometry design for complex shapes and applications
- Utilizes Australian steel profiles and material grades
- All product and all failure modes individually checked for precise anchor analysis and selection
- Summary or detailed design report options available to save or print
